Becca Friedman Caregiver 001	NYC DOHMH	11-Apr 9-Apr	public health experts residents of the facility's service area		no yes	Zoom interview In-person interview	yes yes	neutral yes	yes	<p>NYC DOHMH representatives don't identify major concerns with NYU Langone Brooklyn's request to decertify 10 inpatient rehabilitation beds (reducing capacity to 20), given the current utilization and the hospitals' broader development plans.</p> <p>The assessment documents a 70% decline in local rehabilitation volume and we learned the facility usually doesn't utilize 20 beds simultaneously. However, in the event NYULH exceeds capacity, they must have plans to support patients requiring in-patient rehabilitation and their caretakers through transportation and clear communication, including language assistance when necessary. We learned NYULH often has capacity in Manhattan, and if the facility exceeds capacity, they'll transfer the most "convenient" patients there. The facility should clarify how it will determine who can conveniently be transferred, prioritizing patient needs. Convenience shouldn't be determined in a way that disproportionately results in patients from medically underserved groups being transferred. And when individuals are transferred, their best interest must be prioritized in determining the receiving facility.</p> <p>While the facility doesn't anticipate payer mix changing, improvements may attract new patients. NYULH should closely analyze whether payer mix changes at the expense of medically underserved populations. If additional patients result in exceeding their capacity, NYULH must ensure medically underserved groups aren't disproportionately subject to longer waits or transfers.</p> <p>DOHMH understands this project takes place in the context of broader plans to add hematology/oncology and coronary care units. While this will add critical capabilities, we look forward to discussing these HEIAs to ensure a holistic, equitable perspective is applied to the developments as a whole."</p> <p>I support it.</p>	
Caregiver 002		9-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	<p>So it would definitely benefit the nurses area to take care of the patient. You have one person watching you, one person that works for you. So yeah, they could definitely benefit all the way the therapists that all of them benefit from it. I think there's more other people that they could also hire to help, I think it's a good idea.</p>	
											<p>The representative emphasized that effective inpatient rehabilitation requires thorough evaluations beyond standard therapies, including identifying cognitive and vision issues. Strong communication between the care team and families, early discharge planning, and seamless transitions to outpatient care were identified as essential for patient success. Concerns were raised about the proposed reduction in rehab beds, especially given the existing limitations in local capacity. The representative noted that patients, particularly those with Medicaid or limited resources, already face challenges accessing top-tier care nearby. Barriers such as transportation, work constraints, and lack of availability at hospital-based facilities can lead to patients being sent far from home or placed in less optimal settings.</p> <p>CBO 001 stressed that missing timely access to acute rehab can result in poorer outcomes, especially for patients with serious conditions like strokes or traumatic brain injuries. Reducing bed availability risks deepening health inequities for medically underserved populations in Brooklyn.</p>
CBO 001		3/21; 3/26; 3/31	community leaders		yes	Zoom interview	yes	no	no		
CBO 002		3/24; 4/3	community leaders		yes	Zoom interview	yes	no	yes	I'm against the proposed project because NYU stands above.	
										<p>NYC DOHMH representatives don't identify major concerns with NYU Langone Brooklyn's request to decertify 10 inpatient rehabilitation beds (reducing capacity to 20), given the current utilization and the hospitals' broader development plans.</p> <p>The assessment documents a 70% decline in local rehabilitation volume and we learned the facility usually doesn't utilize 20 beds simultaneously. However, in the event NYULH exceeds capacity, they must have plans to support patients requiring in-patient rehabilitation and their caretakers through transportation and clear communication, including language assistance when necessary. Emma Clippinger	NYC DOHMH	11-Apr	public health experts		no	Zoom interview	yes	neutral	yes		
										<p>"I think moving the services, it brings a greater good. Actually, we have the space over there that can better serve like, you know, the spaces there. I think it's gonna be the care is gonna be safe, appropriate. We're gonna continue to work with the highest levels of standards that we have. We're gonna continue with same ensuring that there's no language barriers or communication issues coverage will continue the same. I'm sure. So I don't see like a big impact. However, the shortage. I do think I don't know how that's going to impact. I'm not familiar with that at the end of the day. I think this will be the greater good for our patients, because, like, you know, only patients are continuing to come in sicker and sicker, and there's a need for additional like, you know, expansion of services. So I think this will be, bring a greater good to the hospital. But again, it's just from my perspective."</p>	
Internal Stakeholder 001		3/21; 3/24	employees		yes	Zoom interview	yes	yes	yes		

Identifier (i.e., Patient A, Employee B, Respondent 1) or Name (only if requested by stakeholder)	Organization (if applicable)	Date(s) of outreach	What required stakeholder group did they represent?	If other, please describe	Is this person/organization a resident of the project's service area?	Method of engagement (i.e., phone calls, community forums, focus groups, surveys, etc.)	Did this person/organization participate in the meaningful engagement?	Is this person/organization supportive of this project?	Did this person/organization provide a statement?	If permission is granted to share a statement or quote (250 word max), please include below:	If permission is not granted to share a verbatim statement, please include a summary of the statement(s) below:
Internal Stakeholder 002		3/21, 3/27	employees		yes	Zoom interview	yes	yes	no		<p>consistent communication at all stages of care, from admission to discharge. Coordination between care teams and timely discharge planning were cited as essential, particularly for families with limited resources. The unit was described as responsive to feedback, with digital initiatives in place to address patient concerns.</p> <p>Key equity concerns included language access, financial barriers to recommended equipment, and challenges patients face adhering to post-discharge care. The importance of social work in understanding home environments and coordinating home-based supports was highlighted, especially for those without family caregivers.</p> <p>Regarding the proposed move, the stakeholder believed the new space would better support rehabilitation needs. While acknowledging the reduction in beds, they saw potential for more focused care and improved resource coordination. No significant health equity impacts were anticipated, although they recommended monitoring patient volume and wait times as part of future planning.</p>
Internal Stakeholder 003		3/25, 4/1	employees		yes	Zoom interview	yes	yes	no		<p>The representative highlighted the close integration between the hospital's stroke unit and the rehabilitation unit as a key strength. Patients benefit from seamless transitions and proximity to the original care team, which is highly valued in the Jewish community. Rusk Brooklyn was described as a trusted, culturally sensitive provider, with accommodations such as kosher food, Shabbat observance, and staff familiar with religious customs contributing to a positive experience.</p> <p>Concerns were raised about the proposed reduction in beds. The representative noted this would limit access to an already limited supply of acute rehab services in Brooklyn, forcing some patients to seek care farther from home. This presents significant challenges for observant families, particularly during religious holidays when walking proximity is essential.</p> <p>While the current program is praised for its quality, cutting beds was viewed as a setback to growth efforts and as potentially harmful to equitable access for community members who depend on local, culturally competent care.</p>
Internal Stakeholder 004		3/24, 4/1, 4/2	employees		yes	Zoom interview	yes	yes	yes	<p>"The proposed statement from a health equity lens that we are proposing, to move acute rehab into Augustana, is only going to add more value directly for patients. It's going to provide better care. It's also going to increase our space for us to have more patients that are coming directly through emergency room to serve the population in Sunset Park area. Our goal as an organization is just to make sure that there are 3 underlying things that we take at utmost length is the quality that we do. It will increase our quality across the board for patients not staying in the ED. It will also increase our safety, and it will definitely increase our patient experience for the population within our neighborhood."</p>	
Internal Stakeholder 005		3/24, 3/27	employees		yes	Zoom interview	yes	yes	yes	<p>"My statement is really Rusk provides amazing services to this community, regardless if it's on this side or across the street. They will get the same wonderful services that Rusk provides."</p>	
Internal Stakeholder 006		3/24, 3/27, 4/1	employees		yes	Phone interview	yes	no	no		<p>The stakeholder emphasized the importance of timely access to inpatient rehab, especially for stroke patients, whose recovery is most responsive within the first six weeks. The integration of acute and rehab services on-site allows seamless transitions, immediate physician access, and continuity of care from providers familiar with the patient's history. The shared staffing model between units was noted as a key strength, supporting patient rapport and efficient intervention.</p> <p>Concerns were raised about the proposed reduction in rehab beds, which may delay admissions, especially for uninsured patients who currently benefit from charity care arrangements. Fewer beds could reduce the hospital's ability to offer this support, limiting access to critical rehabilitation for vulnerable patients.</p> <p>The stakeholder also noted that relocating to another building would add time to interdepartmental response, potentially complicating urgent assessments. They expressed strong reservations about the move, citing negative implications for equity, care continuity, and patient-family experience.</p>
Internal Stakeholder 007		3/24, 3/27, 4/1	employees		yes	Phone interview	yes	neutral	no		<p>The stakeholder described the inpatient rehab unit as serving a highly diverse, low-income population with complex needs. Social work plays a central role in supporting patients and caregivers, coordinating discharge plans, advocating for home care services, navigating insurance systems, and addressing financial or logistical barriers. Caregiver capacity and health literacy—particularly regarding medication and follow-up care—were identified as critical factors in a successful discharge.</p> <p>Equity concerns included limited access to transportation, overcrowded living situations, and patients' fear of institutional settings, especially among undocumented individuals. A lack of outdoor space and natural light was noted as contributing to early discharge requests, while family support and caregiver availability remained key challenges.</p> <p>The stakeholder expressed concern about the proposed reduction in beds, which would limit access to acute rehab and negatively impact patient safety and care continuity. While the relocation may offer benefits such as improved space and gym access, it also presents logistical challenges for care teams.</p>
Patient 001		4/2, 4/4	residents of the facility's service area		yes	Phone interview	yes	no	yes	<p>I would like to say that to me this is impossible for them to be taking the space away from us. I think, instead of taking it away, it should be granted that they have the same space, or even more, because there are more people who are living more years nowadays than before, and that would be wonderful to be able to see people with little hope get so much out of life.</p>

If other, please describe	Is this person/organization a resident of the project's service area?	Method of engagement (i.e., phone calls, community forums, focus groups, surveys, etc.)	Did this person/organization participate in the meaningful engagement?	Is this person/organization supportive of this project?	Did this person/organization provide a statement?	If permission is granted to share a statement or quote (250 word max), please include below:	If permission is not granted to share a verbatim statement, please include a summary of the statement(s) below:
Patient 002		4/4, 4/7	residents of the facility's service area		yes	Zoom interview	yes	no	yes	I'm against the move of the rehab facility, for obvious reasons. There'll be less beds. Granted maybe the rooms are a little bigger, but more beds are more important than having more room in the bedrooms. At this point I waited 2 days to get my bed the 1st time on the rehab floor, and I was very lucky, and I was very grateful, and that made a huge difference in my life. For the sake of the community and the people who have less support, I would definitely advocate for leaving the facility the way it is, with more beds and even more staffing.	
Patient 003		9-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	"I think it is a good idea if they want to move to a better location, and if they're moving to a better location would be improved in the new location. I'm sure they also get ideas from this. Build them, too. It's just like in school you love your roommates, you have good grades, everything is going good. One morning they said, next week, I'll move into Room 106. I don't know what's in one of 6. I'm in 102, and I know what's in 102, and it's not easy. People don't like changes, so difficult time to get people to adapt to changes. They usually many times, they're not looking at the big picture the improvement, the benefits that you're gonna get moving from A to B."	
Patient 004		9-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	no		The patient described their experience in the inpatient rehab unit as very positive, noting high-quality care, personal attention from staff, and access to necessary therapies and equipment. Despite undergoing dialysis multiple times a week, they reported overall satisfaction with the services provided. Admission to the unit was initially delayed due to insurance issues, but the patient credited their daughter's advocacy for resolving the matter. They emphasized the importance of having someone to advocate for access, expressing concern that others without such support might face barriers to care. Regarding the proposed relocation and reduction in beds, the patient expressed concern for future patients, noting that reducing the number of beds from 30 to 20 may limit access to critical services, particularly given the existing waitlist. They felt that these changes could negatively impact all patients equally, regardless of background, if they cannot be admitted when care is needed.
Patient 005		9-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	yes	"As long as they can get therapy, it's ok because that's the main thing."	
Patient 006		9-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	no		The patient reported a highly positive experience in the inpatient rehab unit, highlighting attentive care, responsive nursing staff, intuitive and supportive therapists, and a therapy program tailored to real-life activities. The patient noted comfort with the physical space, praising both the room layout and bed quality. Although the patient did not have visiting family nearby, they felt well cared for and emphasized the unit's welcoming environment. They expressed uncertainty about the proposed move due to limited information, but questioned whether reducing the number of beds was an appropriate approach, given the existing demand. The patient observed that many fellow patients were non-English speakers and commended the frequent use of translators. They also noted challenges faced by patients without stable housing or financial resources. While no immediate accessibility issues were observed, the patient emphasized the importance of maintaining the quality of care and access for vulnerable populations if changes are made to the facility or its capacity.
Patient 007		9-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	I hope they can grow bigger and provide more services to the residents, so everyone can be healthy and happy.	
Patient 008		9-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	no		The patient described a positive experience within the inpatient rehabilitation unit, highlighting strong camaraderie among staff and patients as well as a supportive therapeutic environment. They valued the collaborative atmosphere, especially in the gym, and felt that staff were highly attentive and effective in their care. The patient's transition from the stroke unit was delayed due to bed shortages, which added some stress early in their care journey. While the current room felt somewhat tight, they appreciated the attentiveness of the staff and flexible visiting hours for family, which enhanced their sense of support. Regarding the proposed relocation and bed reduction, the patient did not anticipate any negative impacts on care delivery, as long as the same staff and therapists remain involved. They acknowledged that the reduction in beds could limit access for future patients, but expressed confidence in the hospital's cultural and linguistic responsiveness, noting visible use of interpreters and support for patients from diverse backgrounds.

Identifier (i.e., Patient A, Employee B, Respondent 1) or Name (only if requested by stakeholder)	Organization (if applicable)	Date(s) of outreach	What required stakeholder group did they represent?	If other, please describe	Is this person/organization a resident of the project's service area?	Method of engagement (i.e., phone calls, community forums, focus groups, surveys, etc.)	Did this person/organization participate in the meaningful engagement?	Is this person/organization supportive of this project?	Did this person/organization provide a statement?	If permission is granted to share a statement or quote (250 word max), please include below:	If permission is not granted to share a verbatim statement, please include a summary of the statement(s) below:
Patient 009		9-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	no		<p>The patient described a highly positive experience at the inpatient rehabilitation unit, praising the attentiveness of staff, quality of therapy, responsive care, and available technology. Therapies took place in the gym, and the patient reported significant improvement in mobility since admission. The food, entertainment, and room accommodations were also appreciated, and the patient felt the space was sufficient for family visits.</p> <p>The patient identified potential benefits and drawbacks of the proposed bed reduction. Fewer beds could ease nurse workloads and improve individual attention, but would limit access for patients in need—an important consideration in a densely populated city like New York. They expressed concern that the changes might reduce the availability of bilingual or specialized staff, potentially impacting patients from diverse backgrounds.</p> <p>While they did not feel personally affected by the relocation, they acknowledged a brief delay in admission due to insurance. Overall, the patient emphasized the importance of preserving access to quality care.</p>
Patient 010		9-Apr	residents of the facility's service area		yes	In-person interview	yes	no	yes	"I'm against it cause [inaudible], even though we are in a Caucasian part of Brooklyn, I see the services."	
Patient 011		9-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	I think it's fantastic that we move across the street and get more individual attention and all the things that I said. I think it's fantastic. I think also it'll be better for everyone, for the patients, for the visitors, for the nurses, maybe to locate their patients. Make it everything a lot easier. You can like categorize, maybe what the people are there for. I just think it'll help to get the best attention and make it like around even better than it is already about the nurses.	
Patient 012		9-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	no		<p>The patient described their experience in the inpatient rehabilitation unit as positive, noting that staff were patient and therapies were supportive. They received physical, occupational, and some speech therapy, both in the gym and in their room. Admission to the unit occurred without delay following a fall-related injury, and the patient expressed satisfaction with the care and space available.</p> <p>When asked about the proposed relocation and reduction in beds, the patient expressed hesitation about changing what they were already accustomed to, indicating a general preference for stability. They noted that room space felt limited when equipment and visitors were present, especially in shared rooms.</p> <p>The patient raised concerns about communication for individuals who may not speak English, suggesting that language barriers could be challenging. However, they did not express strong opinions on the bed reduction beyond acknowledging that change might affect others differently.</p>
Patient 013		10-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	yes	"Maybe it's a good idea to change but I don't know"	
Patient 014		10-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	"If it's going to be better, sure why not, I'm for change."	
Patient 015		10-Apr	residents of the facility's service area		yes	In-person interview	yes	neutral	no		<p>The patient expressed deep appreciation for the inpatient rehab team, highlighting the dedication of nurses, therapists, and doctors. As a non-English speaker, they received support through translation services but noted that the language barrier made it difficult to express their needs. Despite this challenge, the patient reported receiving compassionate care and emphasized their goal of regaining independence. They described the physical environment as generally adequate, and his wife was able to come twice each day to assist with therapy.</p>
Patient 016		10-Apr	residents of the facility's service area		yes	In-person interview	yes	yes	yes	"I think it's a good idea especially because it is staying in the borough and it's not being set up in another area which is far away. People are familiar with it, and they'll come to it and they'll be very lucky if they're accepted."

If permission is granted to share a statement or quote (250 word max), please include below:	If permission is not granted to share a verbatim statement, please include a summary of the statement(s) below:
Unit Leadership 001		3/24, 3/25	employees		yes	Zoom interview	yes	yes	yes	"So I am pro [the move] because I believe in my team, and of course I brought the situation to them. I was thinking that I would get, "Oh, my God, no!" And instead, I got we can make it. One of the aides said yesterday, "We can make any area look great." Why? Because I don't know if you looked at our data or information. Patient experience on this unit is top in the hospital. That's because I've been here a long time, and of course I'm friends with everyone. Right? So everywhere is clean, everywhere is tidy. And the team said to me, "The space has nothing to do with how we're going to look. We are going to do the same thing over there." If the team is happy, I'm happy. Our patient experience is not going to suffer because an aide let me know that it's about us more than the space, and they see only positives. So we see only positives."	
Unit Leadership 002		3/24, 3/25	employees		yes	Zoom interview	yes	no	no		<p>The stakeholder described the inpatient rehab unit as a vital service for patients recovering from life-altering conditions such as stroke or brain injury. The unit serves a diverse, largely immigrant, and working-class population across Brooklyn and beyond, many of whom face language and socioeconomic barriers.</p> <p>The unit's comprehensive care model includes medical oversight, intensive therapy, caregiver education, and support services such as transportation and food assistance. Key challenges to access include medical and functional eligibility criteria, insurance approvals, and limited capacity to admit uninsured patients, despite the unit's willingness to take charity cases.</p> <p>The stakeholder expressed strong concerns about the proposed relocation and reduction in beds, citing an increase in referrals due to nearby rehabilitation center closures. Reducing beds would limit access, particularly for uninsured individuals, and strain capacity, while relocation to a separate building could delay emergency responses. They did not identify equity benefits from the move and viewed it as a loss of critical community resources.</p>
Unit Leadership 003		3/24, 3/26	employees		yes	Zoom interview	yes	neutral	no		<p>The stakeholder described the inpatient rehab unit as a culturally responsive, community-centered program with Joint Commission certification for stroke rehabilitation. Serving a predominantly low-income, Medicaid-insured, and linguistically diverse population, the unit integrates with local safety net services and provides care regardless of insurance status when possible. The team prioritizes individualized care, particularly for younger stroke patients and those managing complex life circumstances.</p> <p>Concerns were raised about the planned reduction in beds, especially amid regional rehab closures. Reduced capacity may limit access for underserved patients and force difficult decisions about whom to admit, potentially reducing charity care. While the Augustana move offers modernized rooms and greater space for caregivers, the geographic separation from therapy services could impact operational efficiency and staff satisfaction.</p> <p>Equity concerns include language barriers, health literacy, and socioeconomic stressors. The stakeholder emphasized that safe staffing ratios, competent care, and access to local rehab services are critical for equitable recovery and community reintegration.</p>
Unit Leadership 004		3/24, 3/27	employees		yes	Zoom interview	yes	yes	yes	"I am in favor of the proposed change. I think it will be beneficial for the patients, for the staff, and also for the hospital overall. So I'm I'm pro change."	
Unit Leadership 005		3/24, 3/27	employees		yes	Zoom interview	yes	no	no		<p>The stakeholder described the inpatient rehab unit as a high-performing, team-oriented environment with deeply committed staff who foster close, trust-based relationships with patients. The unit primarily serves a racially, linguistically, and economically diverse population from across Brooklyn and surrounding areas. Staff diversity and multilingual capabilities were identified as critical to culturally competent care.</p> <p>Equity concerns included barriers to access due to insurance limitations and logistical challenges such as transportation. The unit currently provides care for uninsured patients through charity support, but the stakeholder expressed concern that reducing beds could limit this flexibility. They noted that the unit operates near capacity, with increasing demand driven by external rehab closures.</p> <p>While the proposed relocation could offer a more modern physical space that could accommodate patient handling and mobility issues, the stakeholder worried about disruptions to established staff dynamics and potential fragmentation of care. Maintaining staffing levels and continuity was deemed essential for preserving patient outcomes and ensuring equitable access to inpatient rehabilitation. Stakeholder also stressed the importance mitigating logistics to accommodate transport times for patients and equipment for therapy sessions.</p>
